GAMIC is a leading company in the meteorological radar market since 1988. GAMIC is selling the **ENIGMA IV Weather Radar Signal Processors** in great numbers worldwide to weather services and radar partners. ENIGMA IV-DPOL represents the de-facto-standard in signal processing on the market.

Since 2013 **GAMIC** sells the low cost X-Band **Radar system GMWR-25 Doppler** radar for stationary, transportable and mobile applications (see picture), also available in DPOL configuration.

ATC Radar Doppler Weather Extractors are deployed to German, Swiss and Canadian Air Force sites in cooperation with AIRBUS Space and Defence. The **GAMIC software suite FROG-MURAN**, Version 4, now has more than 50 weather processing algorithms, including Hydrometeor classification, DPOL rainfall attenuation correction, detection, NOWCASTING and real-time warnings. Specific weather phenomena detection algorithms like for MICROBURST, GUST FRONT, Severe Storm are available. GAMIC HW and SW products are well suited for any application, from single radar site to large nationwide weather radar networks.

GERMANY: We are proud to have successfully serviced the operational DWD radar network and the Hohenpeissenberg Observatorium scientific radar group for more than 15 years – with ENIGMA signal processing, FROG-MURAN data processing (Radrum) and new radar integration (RadSys-E)

Scientific partners like the University of Bonn, FZJ and KIT use GAMIC HW & SW for many years for their successful work.

PROJECTS WORLDWIDE in 2013-14: Brazil, Canada, Cyprus, French Guyana, Indonesia, The Netherlands, Morocco, Paraguay, USA, Dominican Rep., Uzbekistan, Russia ... We will be happy to tell the success stories.

Please visit our booth to see the latest achievements in X-band weather radar, signal- and data-processing system technologies from GAMIC
